

Welding electrodes should be stored in a heated enclosure to insure optimum performance. The coatings on electrodes will absorb moisture and this moisture will affect the ability of the electrode to produce a quality weld.

Properly stored electrodes reduce the chances of weld porosity or cracking.

The PE-2 is a light weight electrode stabilizing oven that is easy to move. The oven can hold up to 10 kilos of electrodes. The PE-2 has a temperature regulator for temperatures between 50 and 200 degrees Celsius

Our welding rod ovens are:

- ✓ **Easy to load**
- ✓ **Lightweight**
- ✓ **Fast Access to Welding Electrodes**
- ✓ **Low Cost Control of Welding Quality**

PRODUCTCODE: 312.PE-2

Electrode capacity	10 Kg
Heating element	180W/360W WIRE WRAP
Voltage	60 V-120V AC/DC 240V AC 50/60 Hx
Average stabilized temperature	50 - 200 °C
Thermostat	Adjustable thermostat with high-limit switch
Chamber size	9.8 cm diameter x 50.2 cm deep
Exterior dimensions	20.6 X 23.5 X 57.8 cm
Net weight	5.3 Kg
